

Neysha Pagan Vargas

Enterprise Data Platform & AI Governance Leader | Director, Data & Analytics | CDAIO-Ready

Tampa, FL · npagan247@gmail.com · (787) 242-2474 · linkedin.com/in/neysha-pagan · Portfolio: neypagan.github.io

PROFESSIONAL SUMMARY

End-to-end enterprise data platform builder with 14+ years turning fragmented operational systems into governed, measurable, AI ready data products. Combines DBA depth, cloud architecture, data engineering, BI, semantic modeling, governance, and executive strategy into one leadership profile. Currently leading a 7-brand Azure/Fabric Medallion platform at StayTerra, reducing daily cloud spend by 48%, improving processing performance up to 87%, and shaping the data operating model needed for trusted analytics and future AI adoption.

EXECUTIVE IMPACT HIGHLIGHTS

- **Data Operating Model:** Established strategy, governance, access control, Dev/Test/Prod promotion, semantic model ownership, certified-report discipline, and KPI standardization patterns for enterprise analytics.
- **Platform Scale:** Expanded Azure/Fabric Lakehouse scope from 4 to 7 entities while standardizing ingestion, transformation, reporting, metadata, and governance patterns across business units.
- **Cost and Performance:** Reduced daily cloud platform spend by 48% and accelerated processing by up to 87% for multiple business units through Fabric/Databricks tuning, capacity governance, scheduling, and compute reuse.
- **AI Ready Data Products:** Converted ad hoc reporting needs into governed semantic models and trusted data products aligned to RevPAR, ADR, Occupancy, OTIF, executive reporting, and future AI/ML enablement.
- **Enterprise Modernization:** Architected Azure Databricks/Delta Lake Medallion architecture integrating 15+ data sources, reducing reporting latency from 24 hours to under 2 hours, and enabling SCD Type 2 history.

CORE ENTERPRISE CAPABILITIES

Data Strategy & Governance: Data operating model, CDO/CDAIO roadmap, KPI governance, semantic model governance, data quality, lineage, auditability, access governance, AI readiness

Cloud Data Platforms: Microsoft Fabric, OneLake, Azure Databricks, Delta Lake, Azure Data Factory, ADLS Gen2, Medallion Architecture, Lakehouse/Warehouse architecture

Engineering, BI & Automation: PySpark, Spark SQL, T-SQL, PL/SQL, Python, PowerShell, SSIS, Git/GitHub, Azure DevOps, CI/CD, Power BI, DAX, SSRS, Tableau, Excel Power Pivot

Database Reliability: SQL Server 2005-2022, Azure SQL Database, Oracle 10g/11g/12c, MySQL, PostgreSQL, MariaDB, Snowflake, AWS, Always On Availability Groups, HA/DR, RPO/RTO

Business Domains: Hospitality/vacation rentals, insurance, healthcare, audit, aerospace/defense, public sector, consulting, enterprise reporting operations

PROFESSIONAL EXPERIENCE

StayTerra Vacations · Bradenton, FL | **Manager, Analytics & Reporting** | Sep 2025-Present

- Own enterprise data strategy, analytics governance, KPI standardization, and data-platform roadmap for a multi-brand vacation rental organization moving from siloed MySQL reporting to governed Azure/Fabric analytics.
- Architected and scaled centralized Microsoft Fabric/Azure Databricks Lakehouse platform from 4 initial brands/entities to 7, unifying ingestion, transformation, reporting, and governance patterns across business units.
- Designed metadata-driven Landing, Bronze, Silver, and Gold layers using ADF, Azure Databricks, Delta Lake, OneLake, Fabric Lakehouses/Warehouses, and Power BI semantic models.
- Built ST_Metadata governance framework for source discovery, table coverage inventory, run-level auditability, watermark logic, schema validation, lineage/traceability, and data quality controls.
- Reduced daily cloud spend by ~48% through Databricks/Fabric orchestration redesign, cluster reuse, refresh sequencing, workload isolation, SKU analysis, and capacity governance.
- Improved processing performance up to 87% for one business unit and ~85% for another by redesigning pipelines, aligning schedules, reducing compute waste, and stabilizing dependencies.
- Established Gold workspace governance, Dev/Test/Prod deployment discipline, certified-report practices, access-control expectations, and semantic model ownership standards for enterprise reporting.
- Partner with executives, analysts, data scientists, consultants, and business owners to convert reporting requests into governed, scalable, AI ready data products aligned to RevPAR, ADR, Occupancy, OTIF, and leadership KPIs.

Deloitte · FL / Remote | **Manager, Solutions Architecture** | Oct 2022-May 2025

- Architected and implemented Azure Databricks/Delta Lake Medallion architecture integrating 15+ disparate data sources, reducing reporting latency from 24 hours to under 2 hours, and enabling SCD Type 2 history.
- Led CBR Lakehouse ingestion and transformation patterns across ADF, PySpark, Spark SQL, SQL Server, Delta tables, Parquet, and partitioned storage structures for multi-million-record workloads.
- Built metadata-driven validation and reconciliation logic for large CSV/Parquet pipelines, including latest-file selection, record-count audits, schema standardization, and Bronze-to-Silver data quality controls.
- Resolved complex source-data quality issues including JSON/dictionary flattening, column displacement, malformed values, null/duplicate handling, and inconsistent member-firm identification.
- Improved query performance by 40% and reduced redundant data through reusable engineering patterns, optimized transformation logic, table design, partitioning/indexing strategy, and performance tuning.

- Translated technical risks, data quality findings, architecture trade-offs, and delivery progress into executive-ready presentations, project roadmaps, and stakeholder communications.

Neudesic · NY / Remote | **Senior Consultant I - Data & AI** | Mar 2022-Oct 2022

- Delivered client-facing Power BI, tabular model, DAX, scenario-based KPI, dimensional modeling, and self-service analytics solutions across Microsoft data-platform engagements.
- Supported Azure Synapse pipeline design, data warehouse modernization, semantic modeling, and analytics architecture recommendations for enterprise reporting use cases.
- Evaluated Microsoft Purview for metadata management, cataloging, lineage, governance, and enterprise data stewardship operating-model needs.
- Mentored interns and junior team members on SQL, Power BI, dimensional modeling, dashboard quality, and consulting delivery expectations.

Dude Solutions · Remote | **Database Engineer** | Aug 2021-Mar 2022

- Managed transactional and analytical database infrastructure supporting performance, availability, scalability, reporting reliability, and production operational continuity.
- Supported AWS and Snowflake migration readiness by analyzing source environments, data movement considerations, database dependencies, and cloud transition risks.
- Optimized SQL Server workloads through query tuning, index review, maintenance routines, monitoring, and production troubleshooting that stabilized reporting and application dependencies.

Deloitte Services LP · Remote | **Lead DevOps Engineer / System Administrator** | Jan 2019-Aug 2021

- Supported Azure SQL Databases and SQL Server VMs across enterprise environments, focusing on security, performance, access management, monitoring, and operational reliability.
- Automated recurring DBA and DevOps tasks using PowerShell, T-SQL, and CI/CD-oriented scripting, including user access controls, health checks, performance monitoring, and index maintenance.
- Built Power BI/Excel operational reporting to increase visibility into infrastructure, access, workloads, and database performance metrics for support and leadership teams.
- Coordinated release support, environment readiness, incident troubleshooting, runbooks, and cross-functional support practices to improve repeatability and uptime.

DXC Technology · Remote | **Professional Database Engineer** | Jul 2017-Jan 2019

- Supported 700+ SQL Server and Oracle databases across commercial, aerospace, and defense clients in high-availability, production-focused environments.
- Managed backups, restores, patching, migrations, health checks, performance tuning, capacity monitoring, and operational reporting for enterprise database estates.
- Produced database health and performance reports that helped leadership and client teams identify risks, prioritize remediation, and improve service reliability.

Molina Healthcare · Remote | **MSSQL Analyst, Reporting & Analytics** | 2016-Jul 2017

- Built healthcare and finance analytics datasets, SQL reporting processes, Power BI reports, QNXT/MedInsight validation outputs, and compliance reporting for operational and government-facing stakeholders.
- Transformed claims, finance, and operational data into reconciled reporting structures, improving trust in recurring analytics and downstream decision-making.
- Partnered with business users to define reporting requirements, investigate data discrepancies, and strengthen data-quality controls in healthcare analytics workflows.

Eastern Consulting Group · Remote / Puerto Rico | **Database Administrator & Developer** | 2015-2016

- Worked closely with the CEO and CIO to define data strategy and platform modernization solutions focused on integrating, consolidating, and improving access to patient data, medical insurance brand data, and reporting aligned with Puerto Rico Department of Health requirements.
- Led Access-to-SQL migration work, converting legacy desktop database processes into more stable SQL-backed reporting and operational data structures.
- Managed SQL Server/MySQL administration, backup/recovery, user access, disaster recovery planning, database health assessments, and data warehouse modernization recommendations.

Puerto Rico Highway & Transportation Authority · Puerto Rico | **Database Administrator, Oracle & AIX** | 2012-2015

- Administered Oracle 10g and AIX public-sector environments over a 3-year period, supporting operational systems, database reliability, backup/recovery, and platform monitoring.
- Collaborated with technical and operational teams to support reporting needs, database changes, production troubleshooting, and long-term platform continuity.

EDUCATION & CERTIFICATIONS

- **M.S., Applied Data Science - Syracuse University** | B.S., Computer Information Systems - University of Puerto Rico at Mayaguez
- **CDAIO (Chief Data & AI Officer) Program** - Carnegie Mellon University (In Progress, Expected Jul 2026)
- **Microsoft Certified:** Azure Database Administrator Associate | Azure Fundamentals | Azure Data Fundamentals | Administering a SQL Database Infrastructure | MTA Database Fundamentals
- Profisee Master Data Architect & Master Data System Administrator | SAFe 5.0 Agilist | IBM Big Data Technologies | Microsoft AI & Data Science
- **CDMP (Certified Data Management Professional)** — in progress, workshops completed.
